National Register of Historic Places Registration Form

This form is for use in nominating or requesting determination for individual properties and districts. See instruction in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

historic name Grafton Bank
other names/site number N/A

2. Location

street & number 225 East Main Street [N/A] not for publication
city or town Grafton [N/A] vicinity
state Illinois code IL county Jersey code 083 zip code 62037

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this nomination request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property meets does not meet the National Register criteria. I recommend that this property be considered significant nationally statewide locally.
(See continuation sheet for additional comments [].)

(Describe the historic and current condition of the property on one or more continuation sheets.)

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

[] A Property is associated with events that have made a significant contribution to the broad patterns of our history

[] B Property is associated with the lives of persons significant in our past.

[X] C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.

[] D Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

Property is:

[] A owned by a religious institution or used for religious purposes.

[] B removed from its original location.

[] C a birthplace or grave.

[] D a cemetery.

[] E a reconstructed building, object, or structure.

[] F a commemorative property.

[] G less than 50 years of age or achieved significance within the past 50 years.

Narrative Statement of Significance

(Explain the significance of the property on one or more continuation sheets.)

9. Major Bibliographic References

Narrative Description

Located at 225 East Main Street in Grafton, Illinois, the Grafton Bank is situated in the central/east portion of the Grafton business district on the south or river side of Main Street. The Grafton Bank was built in 1913, and is a one-story building of Classical Revival style architecture constructed of buff colored brick with cream colored terra cotta detailing. The building is built at-grade on the Main Street elevation, and has no setback; its entrance is directly at the sidewalk. Structural and historical integrity have been preserved except for some very minor interior modifications to service areas. The nomination consists of one contributing building.

Exterior

Grafton Bank is built with a limestone foundation; the grade of the lot drops away to the south, toward the Illinois River, thus exposing the south elevation of the basement. The nearly full height rear basement level is laid with rock-faced, random coursed limestone.

The main (north) elevation consists of three bays with the center bay having a formal, classically detailed entryway (photo 1). A wide, one-light wood door with one-light transom is flanked by one-light sidelights also with one-light transoms. This entryway is surmounted by a terra cotta transom bar set below a Diocletian window; the entire ensemble is surrounded by a terra cotta architrave. Terra cotta pilasters, complete with entasis, flank the entryway; the pilasters have terra cotta bases and stylized capitals with a single small rosette in the frieze. Decorative terra cotta cornucopia fill the spandrel areas (photo 5).

Flanking the center bay in the first and third bays are single one-light rectangular windows separated from their square one-light transoms by terra cotta transom bars. Decorative terra cotta swags are found above the windows.

A modified Doric order entablature is located above the pilastered entrance (photo 4). The terra cotta entablature consists of three parts: a two-part architrave, a wide frieze, and a prominent three-part cornice including dentils. The frieze is inscribed "GRAFTON BANK" above the entryway, and is set between two triglyphs with guttae. A short brick parapet with terra cotta coping completes the elevation. The bank's brickwork blends with that of the adjacent building to the west, with the bank's overhanging cornice extending approximately one foot onto the adjacent building's wall.

The east elevation of the bank has buff colored brick laid in running bond, and the entablature details of the main facade return approximately one foot (photo 2). Four one-over-one windows with double rowlock segmental arches and header brick sills are equally spaced along the side. The building's shed roof is found behind a stepped parapet with tile coping.

National Park Service

National Register of Historic Places
Continuation Sheet

Grafton Bank; Jersey County, Illinois
Historic Resources of Grafton, Illinois
Section number 7

Page 2

The rear or south elevation of the building is visible from the rear alley. The building is substantially recessed from the adjacent building to the west (photo 3). This elevation has a three bay composition on the raised first floor, with one-over-one double hung windows in the first two bays and a blind third bay. The windows are detailed like those on the east elevation. The tall limestone foundation is blind, and apparently does not include a basement, or at least not a full basement.

The west elevation is not visible because it is attached to the adjacent building. While the bank's brickwork and cornice extend onto this building's facade, documentation reveals that the western building was built separately. It is therefore not considered part of this nomination.

Interior

The interior of the Grafton Bank consists primarily of one large space with the rear (south) quarter divided into service areas. Natural oak woodwork is extant in simple boxed door and window surrounds and a high "plate" rail. Narrow wood flooring is found throughout the building, except for a triangular area in front of the main entry where an early synthetic (possibly linoleum) covering is found. The base of the floor is concrete. Early fluorescent light fixtures hang from the ceiling as do modern wood paddle fans.

A walk-in safe is located in the west wall with "Grafton Bank" painted on the door. The safe was made and inscribed by the Mosler Safe Company.

Two-thirds of the rear section's width is an open office area divided from the main banking space by a simple wood lintel. A small room is found to the east of the office area with access from the main room. Behind the small room and opening into the office space is a restroom. An interior furnace chimney is located in the southwest corner of the office.

In the main room, just left (east) of the rear open office section, a trap door is set in the floor. This has not been investigated by the owners. The door, however, may provide access to a lower level storage room or crawl space. Sanborn Maps indicate the building has a sub-basement.

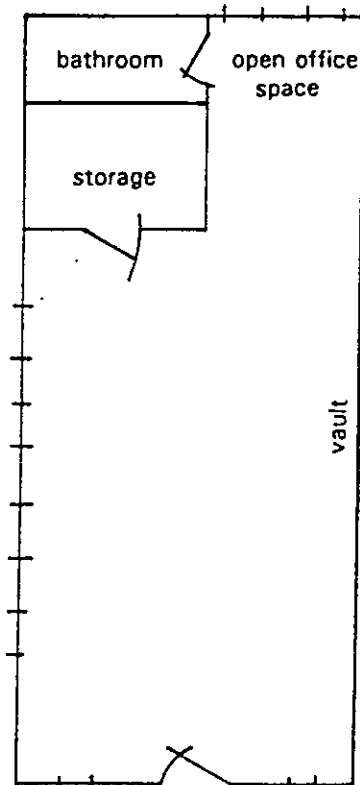

The building, currently for sale, is being used by the Salvation Army in connection with flood relief efforts in the community. The Grafton Bank retains its structural and architectural integrity in both its exterior facades and the public space of the interior.

Historic Resources of Grafton, I

The following text is supplemental information on the 1993 flood damage to historic resources in Grafton, Illinois.

The flood of 1993 damaged several dozen pre-World War II buildings/structures in Grafton, and the resources were underwater for several months during the spring, summer and fall of 1993. Grafton does not have a levee and therefore resources were slowly submerged in water over the course of days or weeks. The dramatic scenes of buildings being swept away by flood waters did not occur in Grafton. The flood water depth varied depending on how elevated the buildings were above the river. In some cases only the basements filled with water, and in others the water completely submerged one-story buildings to the eaveline. In general, the flood caused more damage to modern materials than historic fabric. For the most part, building rehabilitation will involve the repair or uncovering of historic materials and the replacement of modern materials.

With the recession of flood waters, the extent of the damage became apparent. Some buildings and/or porches that were not properly anchored to permanent foundations were dislodged (and in some cases, actually floated away from their site). However, most buildings remained in place. Some masonry buildings have shown settlement cracks after the flood. Basements were flooded and the mortar in masonry walls had been leached out by the flood waters. Repointing of brick and stone walls (both foundation and first floor level) will be necessary. Some brick replacement will be required where the bricks themselves spalled or were scoured out by flood water. Modern exterior synthetic siding oftentimes became warped after drying out. All buildings were covered with river mud and debris and they all need to be cleaned. Utility systems were permanently damaged by the flood, and most buildings will need new furnaces, electrical wiring, and air conditioning units.

On the interior, wood and plaster finishes were waterlogged, and most tongue and groove floors did not dry out without warping or buckling. Modern drywall (and insulation), plasterwork, doors, window moldings, and floor coverings were submerged or became saturated and had to be removed. Many historic interior finishes, such as door and window moldings, plaster, doors, and windows dried out with little structural damage. Historic wood finishes -- varnish, graining, etc. were literally dissolved by the flood waters.

Historic Resources of Grafton, IL

Specific information on the damage to the nominated buildings in Grafton is as follows:

1. Slaten-LaMarsh House, 25 East Main Street

The Slaten-LaMarsh House was flooded approximately 3-4 feet high through the first floor of the building. Repointing of the masonry foundation is required, and utility systems must be replaced. In the recent past the interior of the building had been remodelled, and all of the modern finishes were destroyed by the flood. However, historic wainscoting, floors, and some window moldings survived on the first floor. The second floor was not damaged by the flood.

2. Grafton Bank, 225 E. Main Street

Basement flooded which caused the ash fill to settle below the first floor concrete floor. Rehabilitation will require the concrete floor to be removed and reinstalled.

3. John and Amelia McClintock House, 321 E. Main Street

Basement flooded. New furnace needed, and some repointing of concrete block foundation walls.

4. Ruebel Hotel, 207-215 E. Main Street

Basement and approximately 18 inches of first floor flooded. 1/3 of first floor flooring buckled from both flood waters and roof leaks. Water heaters, furnace, and electrical wiring must be replaced. Basement historic metal ceiling was apparently damaged, however, at this time, it is uncertain how much must be removed. Modern drywall and insulation will be removed.

5. Paris Mason House, 100 N. Springfield Street

In the recent past the house had been remodelled on the interior with drywall and modern doors and windows. All historic plaster and most of the woodworking were removed at the time of the remodelling. The building is now stripped back to the historic stud walls on the interior. The historic staircase still remains. The second floor is intact, and the integrity of the building rests on its stone and brick nogging method of construction.

United States Department of the Interior
National Park Service

National Register of Historic Places Continuation Sheet

Section number _____ Page _____

Historic Resources of Grafton, I.

6. Grafton Historic District

Nearly all of the buildings in the district were flooded to some extent. The properties at the east end were flooded through the first floor and at the west end only basements were flooded. Exterior synthetic siding was damaged by the flood, and modern interior finishes have been removed from approximately 1/3 of the buildings. Some foundations will need repointing, however, none of the buildings suffered major structural damage. All need to be cleaned and some will need new utility systems. The extent of the damage to the historic wharf is unknown, however, the structure appears to be in the same condition as it was before the flood. This structure is flooded almost every spring.

Narrative Statement of Significance

The Grafton Bank is eligible to the National Register under Criterion C for Architecture, being an excellent example of Classical Revival style architecture in Grafton. The Grafton Bank meets the registration requirements for the property type "Resources Associated with Commerce," subtype "Commercial Buildings," as defined in the Multiple Property Documentation form "Historic Resources of Grafton, Illinois, c. 1830 - 1943." Constructed in 1913, the building is significant within the associated historic context "The Era of Modern Transportation, c. 1913 - 1943."

The Grafton Bank is the city's only example of the Classical Revival style fully expressed on a commercial building. The buff colored brick building is highly adorned with cream colored terra cotta Classical Revival detailing. The narrow building is virtually consumed by its elaborate terra cotta detailed entrance and full entablature.

The wide central door of the Grafton Bank is framed by a one-light transom and one-light sidelights also having one-light transoms. The terra cotta transom bar above the doorway is topped with a Diocletian window, and the entire grouping is surrounded by a terra cotta architrave. Terra cotta pilasters with entasis flank the entry and terra cotta cornucopia fill the spandrel spaces. Small terra cotta rosettes are in the frieze of the pilasters. A full terra cotta entablature of the Doric order spans the building's front. Centered above the bank's entry, the wide frieze is inscribed "GRAFTON BANK," and is set between two triglyphs with guttae. A prominent projecting cornice with dentils completes the entablature.

The history of the bank itself is sketchy at best. The 1885 *History of Greene and Jersey Counties, Illinois* discusses a bank which may be the precursor to the Grafton Bank. The Bank of Grafton was established in October 1869 by W.H. Allen and E.A. Pinero. William Allen was the son-in-law of James Allen, founder of Grafton. E.A. Pinero was William Allen's son-in-law. The pair operated the bank as a partnership until 1873 when William Allen became the sole owner. On July 5, 1883, ownership of the bank again changed hands, with William Allen, Charles P. Stafford, and Ernst Meysenburg serving as directors. Meysenburg also served as cashier of the bank. Some local histories note that the Grafton Bank was one of two banks operating "up until the early 1900s," but at no time are two banks noted simultaneously on Sanborn Maps.¹ The "Bank of Grafton" may have been the predecessor to the "Grafton Bank," or it could have been an entirely separate operation.

Sanborn Maps, available for 1894, 1900, 1914, and 1936, indicate only one bank in Grafton in 1894, located on the south side of Main Street, one lot west of Cherry Street, just east of the Grafton Manufacturing Company (the flour mill operated by William Allen's son, James M. Allen). The 1900 map indicates that this bank building and its vault are intact, but the building is labeled "offices," rather than its earlier notation as "bank." The site at what is now 225 East Main Street was occupied by a drugstore, with the original Ruebel Hotel located farther west on this block.²

Page 5

In December 1912, a great fire swept part of Main Street and the Ruebel Hotel and adjacent buildings were destroyed. Rebuilding occurred in 1913, and by 1914, the Sanborn Map notes a bank at 225 East Main Street, a two story store building adjacent to the west, and the Ruebel Hotel to the west of the store. While the brickwork of the bank and the adjacent store building blend to the point of not being able to make a distinction in the front walls, the Sanborn Maps confirm the buildings as being separate. Curiously, the location of the vault on the bank's west wall is not clear. Sanborn Maps indicate an iron door into the bank, as is currently extant; the word "vault" appears along the building's west wall. The Sanborn Maps further indicate an opening for an iron door extending into the adjacent building. This would be at the staircase (perhaps beneath) to access the second floor of the adjacent store. The vault remains a mystery, as its combination is not known. A small room in the southeast corner of the bank is indicated on the Sanborn Map of 1914. Fireproof construction is also noted. The 1936 Sanborn indicates, presumably incorrectly, that the building was constructed in 1910, additionally noting concrete floors, a concrete roof, and brick walls.

The Grafton Bank was reputedly operated until around 1935-36, when it was closed during the Great Depression, and apparently never reopened. In recent years, the Grafton Bank building has had a number of occupants, including the Central Illinois Public Service Company, an antique shop, and now, storage for the Salvation Army.

The Grafton Bank retains a high degree of integrity, with all of its terra cotta detailing intact, and its interior spaces much as they were originally. It remains in Grafton as the only example of the Classical Revival style as fully expressed on a commercial building, and is an excellent example of the Commercial Building property type for the "Historic Resources of Grafton, Illinois."

Endnotes

1. Mary Ann Patton Pitchford and Carol Stephens Wallace, *Visions of the Past, Grafton, Illinois*, (Grafton, Illinois: Grafton Bicentennial Committee, 1976), p. 17.
2. The drugstore presumably belonged to Dr. J. Tidball who resided in the brick Queen Anne residence which remains extant just east of this lot.
